

I have had XM Radio installed in my truck for almost 2years and totally love the ease of tuning to traffic and weather with out having to listen to anything that i dont want to. I used to hate to try to find a local station that had traffic and news that was pertinent to my daily life. XM Radio has all the information that i want and need to keep me current on all the daily issues. I am a truck own/operator and for the most part dont have a lot of time to sit and read a newspaper, with their service i can tune in and catch all the latest news and still be doing my job, which is delivering the goods that keep america going. I also like the fact that if i should want to i can find a station that i like and have it coast to coast with out it fading out or losing it 50 miles out. Honestly i dont even listen to local stations anymore, since i have found XM they have all the stuff that i need at my fingertips. I urge you to let XM continue to let XM and for that matter sirrus continue to offer updates to traffic and weather and all the news that they prvide. From what i am seeing, there is a knee jerk reaction to the success of this format of radio. I depend on this service just as it is to bring me all the things that I NEED TO KNOW. most of the time local radio either cant or wont stick to the headlines and tell it like it is, but XM does. To me that is a great thing. I dont have to worry about someone trying to sensor the news or hide things that the local networks find "too hot to handle". It totally amazes me that jthese local stations dont want to try to compete with things as they are because they would have to update their formats. Rather they want to sensor what xm listeners can and cannot hear. To me that is totally UNACCEPTABLE!!!!!!!!!!!! I want to get the info when i want it and XM provides that as well as other valuable information that i need. I want to be able to have this service as it is, unchanged and unsensored. I also want to let you know that i totally oppose the new bill HR-4026. In my way of thinking its just another form of sensorship. Last time i checked we still live in AMERICA. And we do have to freedom of expression. If the local stations want to do anything they should try to improve thier Format
